SCALE: 1" = 40"

This plan is submitted to fulfill the woodland conservation requirements for Grading Permit #7000-2021-00. If #7000-2021-00 expires, then this TCP2 also expires and is no longer valid.

1. Cutting or clearing of woodland not in conformance with this plan or without the expressed written consent of the Planning Director or designee shall be subject to a \$9.00 per square foot mitigation fee. 2. A pre-construction meeting is required prior to the issuance of grading permits. The Department of Public Works and Transportation or the Department of Environmental Resources, as appropriate, shall be contacted prior to the start of any work on the site to conduct a pre-construction meeting where implementation of woodland conservation measures shown on this plan will be discussed in detail. 3. The developer or builder of the lots or parcels shown on this plan shall notify future buyers of any woodland conservation areas through the provision of a copy of this plan at time of contract signing. Future property owners

are also subject to this requirement. 4. The owners of the property subject to this tree conservation plan are solely responsible for conformance to the requirements contained herein.

The property is within the Developing Tier and is zoned R-A. 8: The site is not adjacent to a roadway classified as arterial or greater. This plan is grandfathered under CB-27-2010, Section 25-117 (g).

TREE PROTECTION MEASURES

Tree protection fence and signs are to be installed along the perimeter of existing forest and individual trees to remain. It is to be installed outside of the critical root zone of the trees and the root pruning line (if present) and will be smooth wire fencing. It is to be installed before any more grading. If possible, install before sediment control measures. Necessary signage may be determined during the pre-construction meeting. Grounds maintenance staff shall be instructed to avoid disturbance within designated Conservation areas. Root Pruning is to be performed as per TCP-II, typically outside the critical root zone of specified forest edges and specified individual trees to remain. It is to be accomplished by a vibratory plow with a serrated cutting edge or a root cutter with a 36" wheel to a depth

of 8". Other stress reduction/tree protection measures for individual trees should be implemented at this time.

TREE PROTECTION SEQUENCE

1. Pre-construction meeting: After the boundaries of the limits of disturbance have been staked and flagged, but before any disturbance has taken place on-site, a pre-construction meeting at the construction site shall be held. The developer, contractor, or project manage, all construction personnel, contracted tree professional and appropriate local Off-site WCA being provided on this property (preservation) inspectors shall attend. The purpose of the meeting will be to field verify the limits of clearing as specified on the plan and make any necessary adjustments. They will authorize installation of protection devices and determine location and quantity of necessary signage Enforcement staff will also discuss the value and importance of the preservation areas, outline responsibilities and

discuss violation penalties. An additional inspection may be required after installation of the protection devices before Smaller of 14 or 26 construction is authorized to begin.

2. Tree protection measures and devices shall be implemented after the pre-construcion meeting and prior to any disturbance or clearing activity including erosion control devices.

3. If pruning is specified, do so before installing fence to avoid damage to fencing.

Root prune all designated areas.

5. Install tree protection fence and signs (see detail this page). To be maintained at least through the construction period for retention areas, and through the 2-year maintenance period for reforestation areas unless waived by county

6. When silt fence is specified, it should be positioned outside of the tree protection fence. In areas where silt fence and tree protection fence are to be used a "combination tree protection silt fence" can be used instead. This determination can be made at the pre-construction meeting (see alternative fence detail this page).

7. Approved clearing will take place after all tree protection measures are completed and will occur outside the tree 8. Upon completion of construction, corrective measures may include: Removal of dead or dying trees, pruning of dead

9. Inspection and approval by regulatory agency for Prince George's County.

10. Removal of temporary protective measures, such as tree protection fence and signs.

MISS UTILITY II "Miss Utility" at 1-800-257-7777, 48 hours prior to the start of work The excavator must notify all public utility companies with underground facilities in the area of proposed excavation and have those facilities located by the utility companies prior to commencing excavation.
